

## **Director – Technology (Wireless Access/Tech Management) Regina or Saskatoon, SK**

As the Director – Technology (Wireless Access/Tech Management) at SaskTel, you play a pivotal role in ensuring the efficient engineering, delivery, and support of wireless access technology solutions. Your responsibilities include building a technically proficient team and managing the business unit's budgets to optimize resource utilization. You also focus on fostering strong vendor relationships to secure essential technology and support. Additionally, you coordinate the Technology Division's projects to align with corporate business priorities and strategic Holdco objectives, while overseeing governance processes related to project management within the division.

### **Deliver and Support Engineering Solutions**

Accountable to design and provision customer, wireless access technology solutions, relating to traditional and emerging services and technologies: special services voice and data services, fixed and mobile wireless (access) voice and data, Accountable to provide tier 3 support of wireless voice and data access technologies. Accountable for the performance and optimization of the wireless access network.

### **Build Competency Based Teams**

Accountable to define and build competency-based teams and provide development to address evolving customer demands and technology initiatives. Accountable to provide engineering resources for consultancy services to internal and external teams and colleagues.

### **Manage Capital and Operating Budgets**

Accountable to manage significant demand and planned Capital budgets and Operating budgets. Accountable to develop annual business unit budgets. Accurately forecast customer demand variables to determine the next year's demand budget and provide input to Planning for the next annual planned project budgeting cycle.

### **Partner with Vendors for Beneficial Relationships**

Accountable to ensure healthy vendor relationships are developed and maintained. Accountable to ensure vendors provide competitive pricing, product support, and contractual terms that accelerate our leadership in the delivery of technology-based solutions.

### **Maintain Business Continuity**

Responsible for business continuity planning for the business unit's functions within the company. Accountable to minimize and mitigate exposure and impact to business-critical processes through the effective implementation of Business Continuity Plans and in accordance with responsibilities outlined in the Corporate BCM Policy, the Emergency Operations Procedures and the Emergency Alert Procedures.

### **Champion Data Analytics and Automation for the Technology Division**

Accountable to champion the adoption and use of data analytics and automation within the Technology Division – including and not limited to structure, standards and architecture. Accountable to provide ongoing leadership with the management of Technology's data and associated tools.

### **Manage Technology Management Office**

Accountable to provide advice and support to the Technology Division's management team with a focus on governance and process improvements. Ensures key projects/programs are scoped, planned, and resourced to encourage success. Ensures project priorities are assigned, approved and maintained within the Corporate and Divisional approval processes. Accountable for providing communications, reports, studies and recommendations for SaskTel senior and Executive management. Accountable to meet financial, timing and quality objectives of new programs and projects.
